Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

Disclosure; Page 137; 139pp; English.

CC Segument of the gene has been replaced by a segment of a foreign DNA CC segument of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) CC directing recombination of a recombination of a recombination of the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene into the chromosome of the homologous species, replacing the native CC comprising separating an amino acid polymer comprising a recombinant AgfA (2) eliciting an immune response in an animal. (3) contraining a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CC eliciting an immune response in an animal and introducing the colymer into the animal in conjunction with a carrier or diluent. (1) is CC useful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for CC useful for the hybrid fimbrin protein possesses both the CC immunogenicity and adhesion properties are presented in high numbers (up to CC against the inserted epitope, and hybrid fimbriae are usually strong CC eagainst the inserted epitope, and hybrid fimbriae are easy and CC inexpensive to purify in large amount. The present sequence is given in tx

                                                                                                                                                                                           directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene, and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant Agfa protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant Agfa protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation existem the heterologous anticens are avecanted in high machane.
                                                     system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the account if in the community in large amount.

The DNA and isolated proteins are used in genetic immunization and vaccine compositions, respectively, to elicit immune response to Salmonella in animals (e.g. food producing animals) and humans. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 24-MAR-2003) to correct OS field.)

The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99 of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 361 BP;

SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION UNMEER: US/08/233,788A
FILING DATE: 26-APR-194
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: King, Joshua
REGISTRATION NUMBER: 35,570
REFERENCE/DOCKET NUMBER: 920043.403C2
TELECOMMUNICATION INFORMATION:
TELEPIONE: (206) 622-4900
TELEFAX: (206) 622-4900
TELEFAX: (206) 622-601
TELEEX: 372836 SEEDANBERRY
SEQUENCE CHARACTERISTICS:
LENGTH: 361 base pairs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TTTGGATGATGTTAGGAGTGTACAACCATATAACCCGTACAATGATATTG
/notes "Vector: pBluescript SK(-); Site 1: EcoRI; Site 2: /notes "Vector: plants were grown at Washington State University, Pullman, WA in a greenhouse, the rachises were excised and frozen in liquid nitrogen (Kleinhofs lab). In the TJ Close lab at the University of California, Riverside total RNA was prepared, poly(A) was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmonns, Rambo, Main). The sequence has been triamed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and

Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy_number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XIJO-Gold (Stratagene) cells and selected for ampicillin resistance."

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.2
PAPLICATION NATA:
APPLICATION DATA:
VILING DATE: 26-APR-194
CLASSIFICATION: 424
CLASSIFICATION: 424
ATTORNEY/AGENT INFORMATION:
NAME: King, Joshua
REGISTRATION UNUMBER: 920043.403C3
TELEPHONE: (206) 622-4900
TELEPAX: 3723836 SEEDANBERRY
INFORMATION FOR SEQ ID NO: 56:
SEQUENCE CHARACTERISTICS:
LENGTH: 456 base pairs
TYPE: nucleic acid
STANUBENESS: single
TOPOLOGY: linear

Sequence 11, Application US/09543407

GENERAL INFORMATION:

APPLICANT: White, Aaron P.
APPLICANT: Doran, James L.
APPLICANT: Collinson, S. Karen
APPLICANT: Collinson, S. Karen
ITITLE OF INVENTION: BACTERIAL FIMERIAL SYSTEM FOR
ITITLE OF INVENTION: PRESENTATION OF HETEROLOGOUS PEPTIDE SEQUENCES
CURRENT APPLICATION NUMBER: US/09/543,407

ITITLE OF INVENTION UNMEER: US/09/543,407

CURRENT FPLICATION NUMBER: US/09/543,407

INUMBER OF SEQ ID NOS: 59
SOFTWARE: FRASTSEQ FOR WINDOWS Version 4.0

LENGTH: 456
ITYE: DNA
ORGANISM: Artificial Sequence
PEATURE:
OTHER INFORMATION: Recombinant Salmonella enteritidis 3b afga
OTHER INFORMATION: sequence containing the replacement fragment
